

Aufgabe 11:

$$Q(x) = q_1 x - \frac{q_2 x^2}{2l}$$

$$H(x) = q_1 x \cdot \frac{x}{2} - \frac{q_2 x^2}{2l} \cdot \frac{x}{3} = q_1 \frac{x^2}{2} - q_2 \frac{x^3}{6l}$$
